

Documentation of Code

Julian Hatzky

August 11, 2019

Part I

Explanation

Together with this document there are two sub-folders that are containing all the produced code of the project. There is the python script that contains the AutoEncoder proof-of-concept. It uses Tensorflow 2.0 as a Machine Learning framework and the augmented audio-samples as input. The other folder contains the full quartus project with Testbenches and simulation files.
